Sallie Stores: Apple Retail Sales Insights

Presented By:

Fesomade Alli

This analysis is built on a cleaned and transformed Apple retail sales pipeline — producing reliable, reusable analytics for business reporting and strategic decision-making.

Data note: This is synthetic data used for analytical and pipeline demonstration purposes. Data-quality checks were performed before analysis.

What We Set Out to Understand

We wanted to understand where revenue comes from, how it changes over time, and where operational attention may be needed.

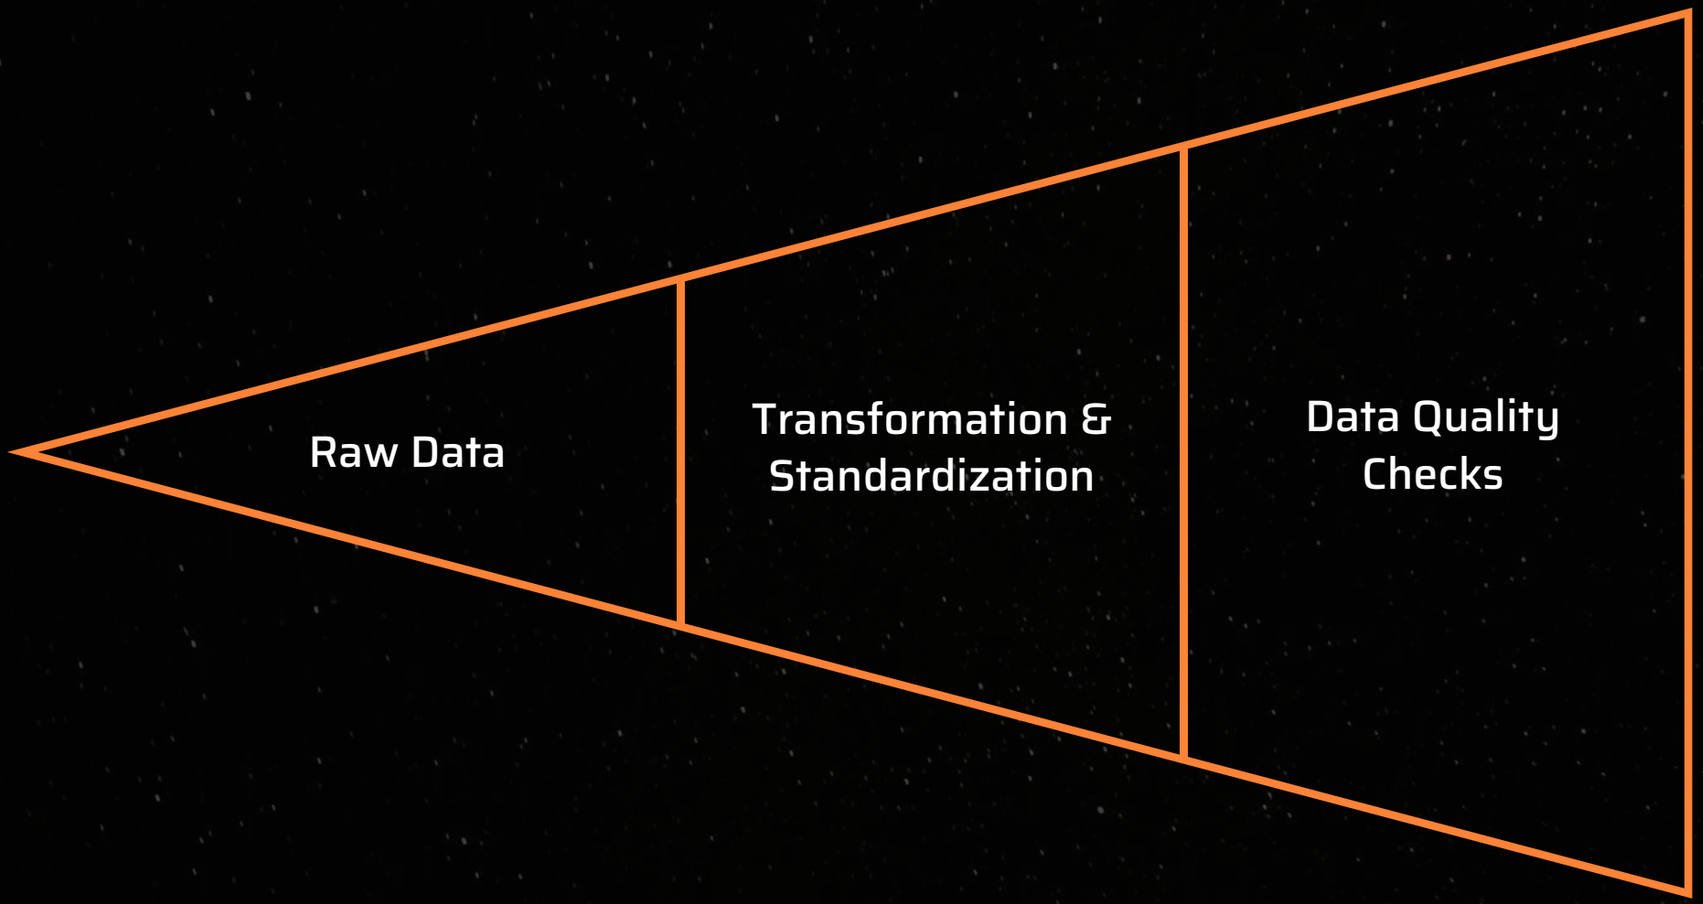

Scope of Analysis

- Synthetic Apple retail sales dataset
- Sales across products, categories, and stores
- Warranty claim tracking by category
- Month-over-month revenue growth

Data note: Synthetic data used for analytical and pipeline demonstration purposes. Data-quality checks performed before analysis.

From Raw Data to Reliable Insights

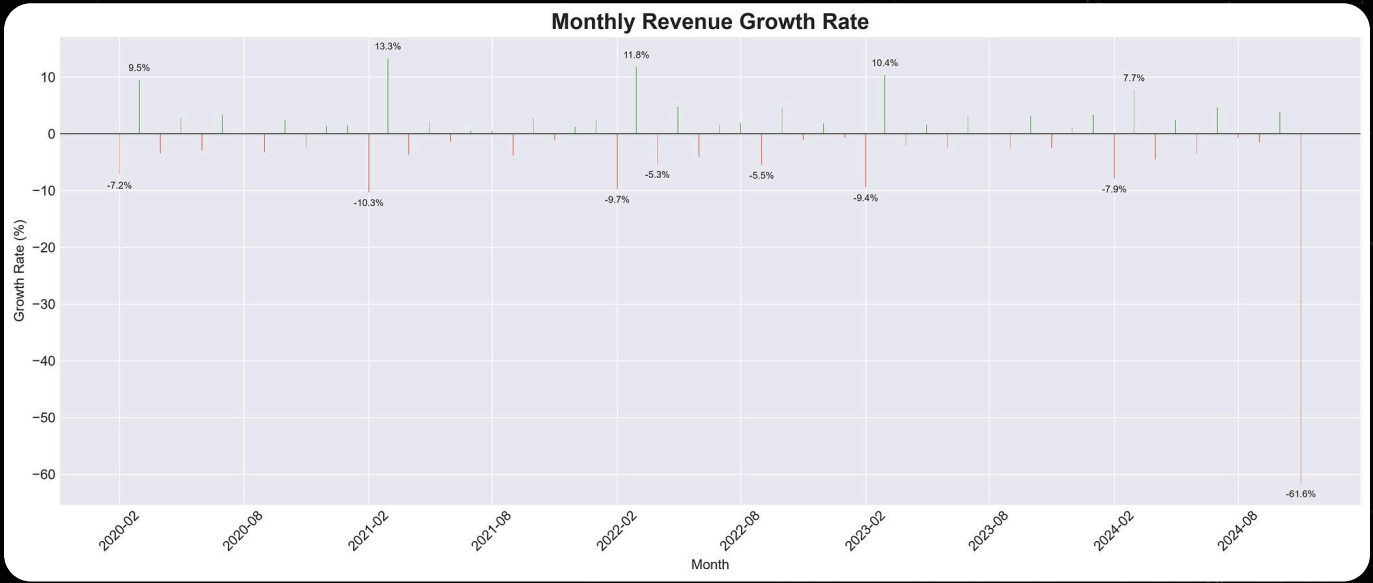

Cleaning and standardizing the data ensures that revenue and operational metrics are based on consistent records — not raw, potentially unreliable inputs.

Pipeline benchmark: In this benchmark, Polars completed the workload approximately 6× faster than Pandas with a substantially smaller reported memory footprint. This result is specific to this workload and not generalized to all scenarios.

Revenue Is Strong but Relatively Stable

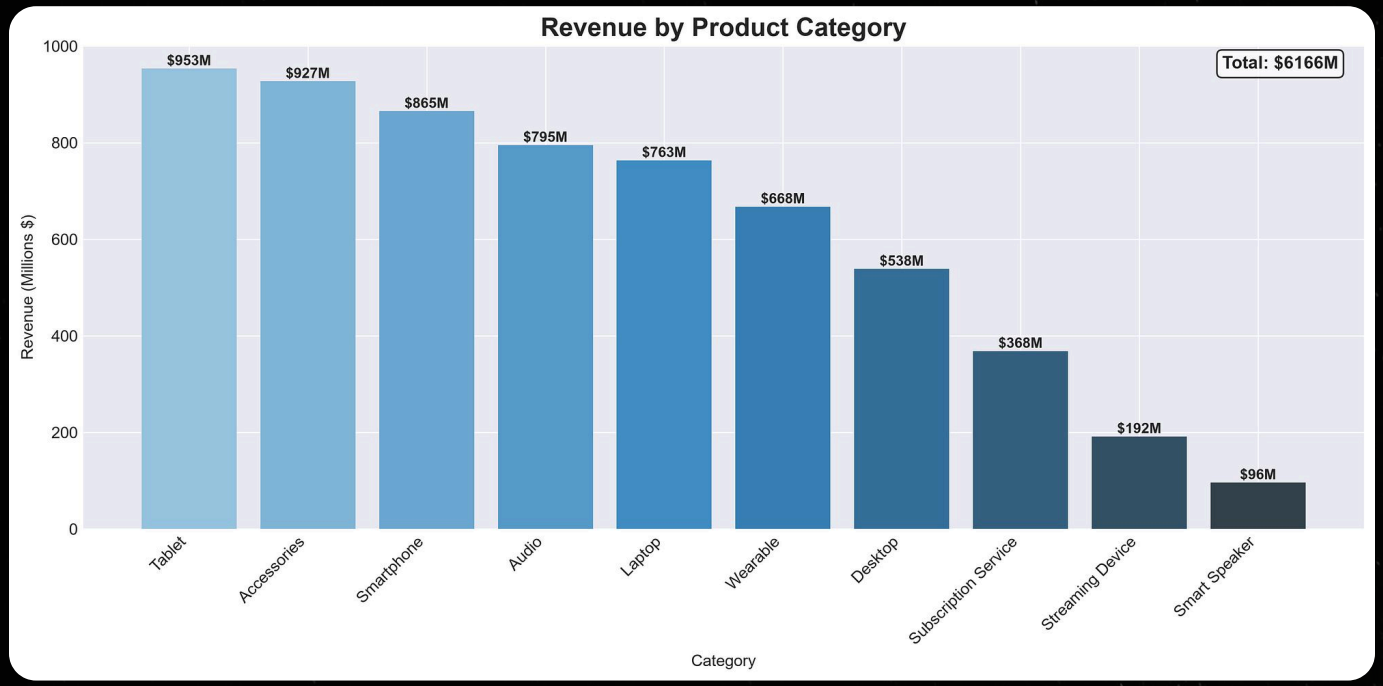

Key Takeaway

Revenue remains relatively stable month to month, with short-term fluctuations rather than a sustained upward or downward trend.

- February shows the largest visible decline: approximately **−7.2%**
- March shows the strongest rebound: approximately **+9.5%**
- Monthly revenue ranges between **$99M and $109M** across the period

Tablets and Accessories Lead Category Revenue

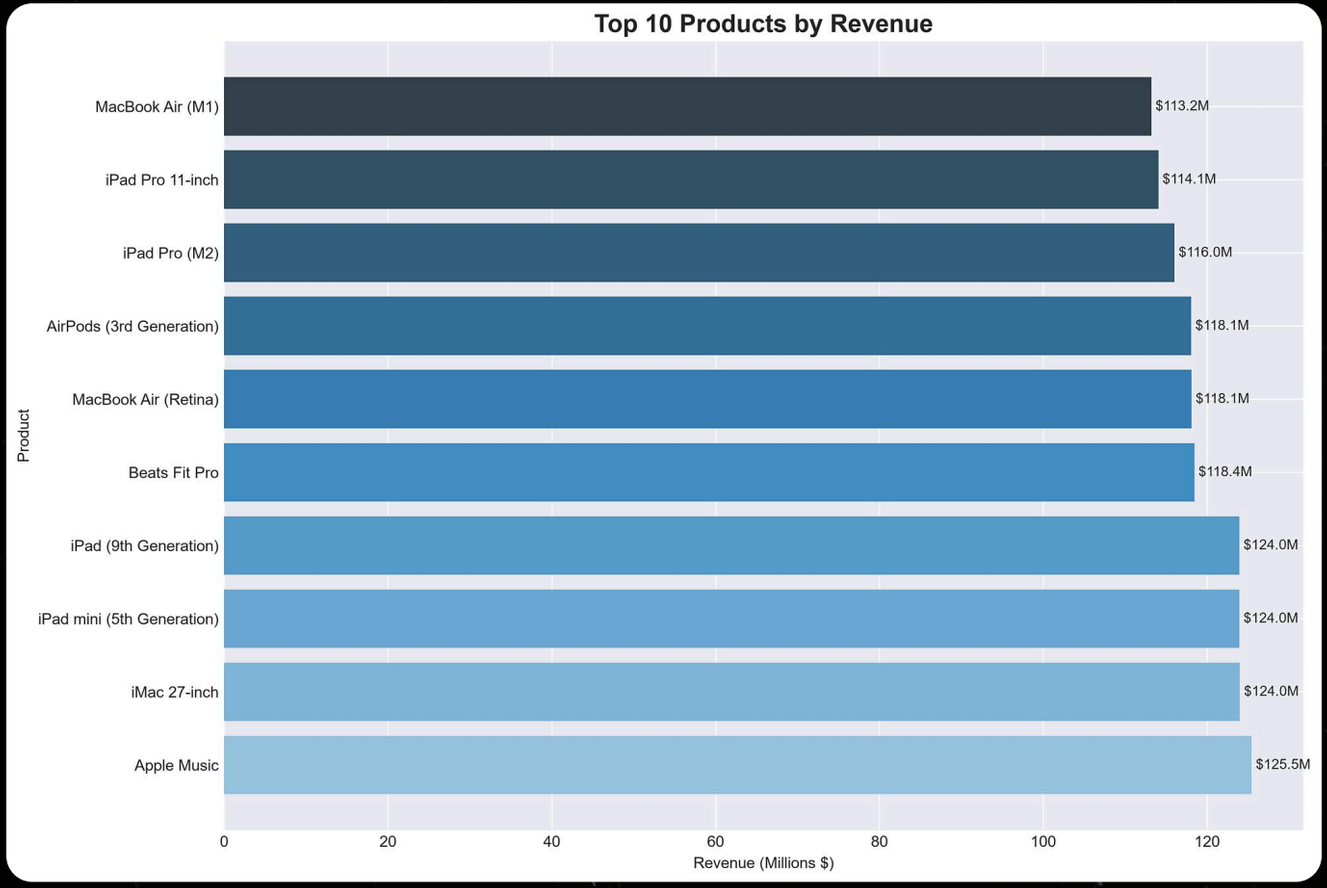

Key Takeaway

Tablet and accessory sales are the strongest revenue contributors, while revenue is broadly distributed across several major product categories rather than relying on one alone.

- **Tablet (CAT-3):** ~$953.4M — highest category revenue
- **Accessories (CAT-10):** ~$927.1M — second-largest contributor
- **Smartphone, Audio, and Laptop** each contribute $763M–$865M

A Small Number of Products Drive Significant Revenue

Key Takeaway

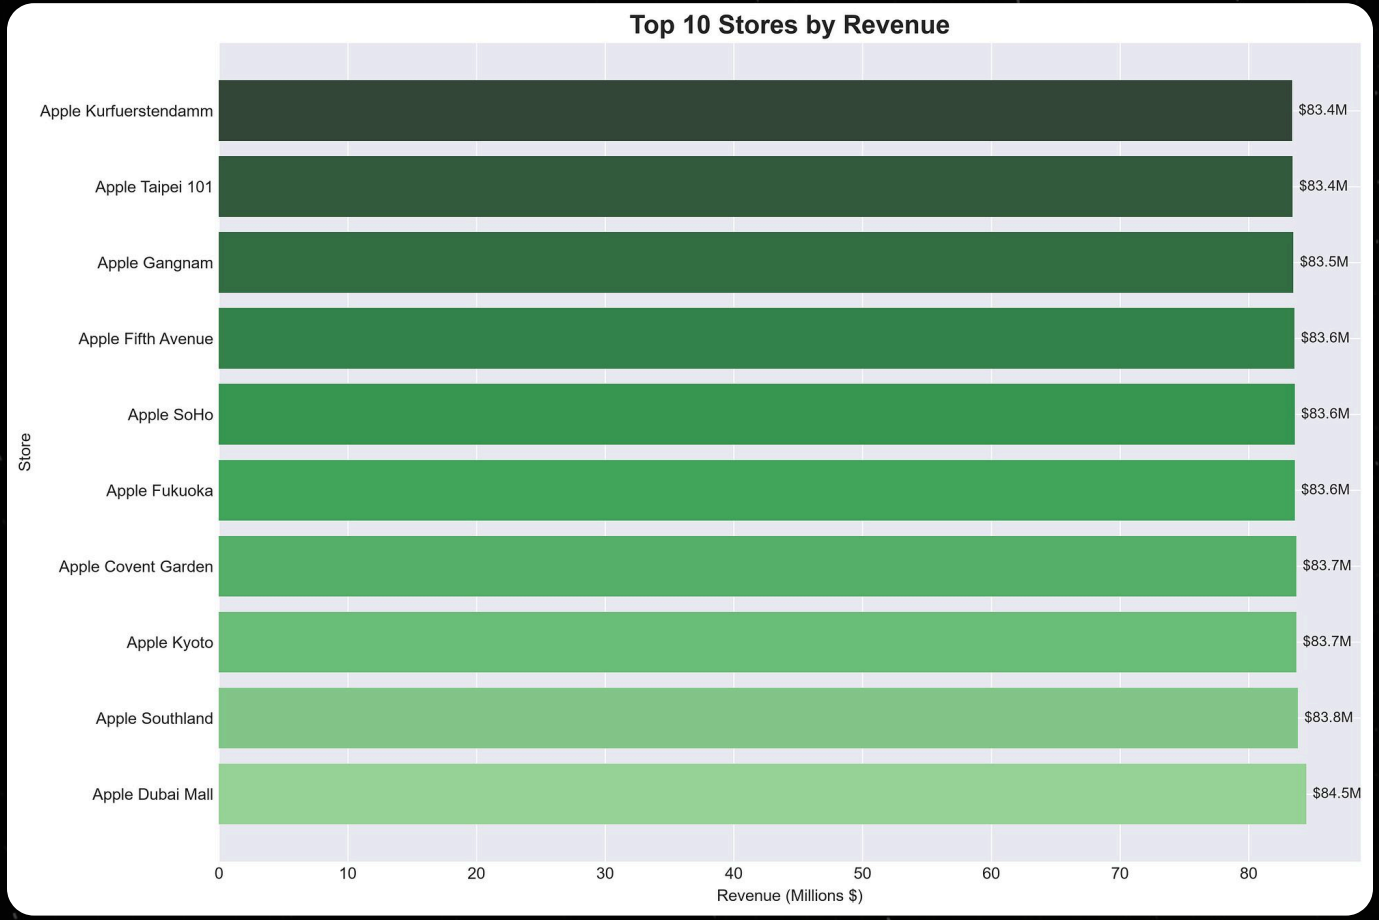

Revenue is concentrated among a small group of high-performing products, creating clear candidates for product-level monitoring and commercial focus.

- **Apple Music:** ~$125.5M — leading product by revenue
- **iMac 27-inch, iPad mini, iPad 9th Gen:** each ~$124M
- **Beats Fit Pro:** ~$118.4M — fifth-ranked product

These five products alone represent a meaningful share of total revenue — making them priority candidates for inventory planning and promotional strategy. Note: this analysis reflects revenue, not profit or margin.

Store Performance Is Broadly Distributed

Key Takeaway

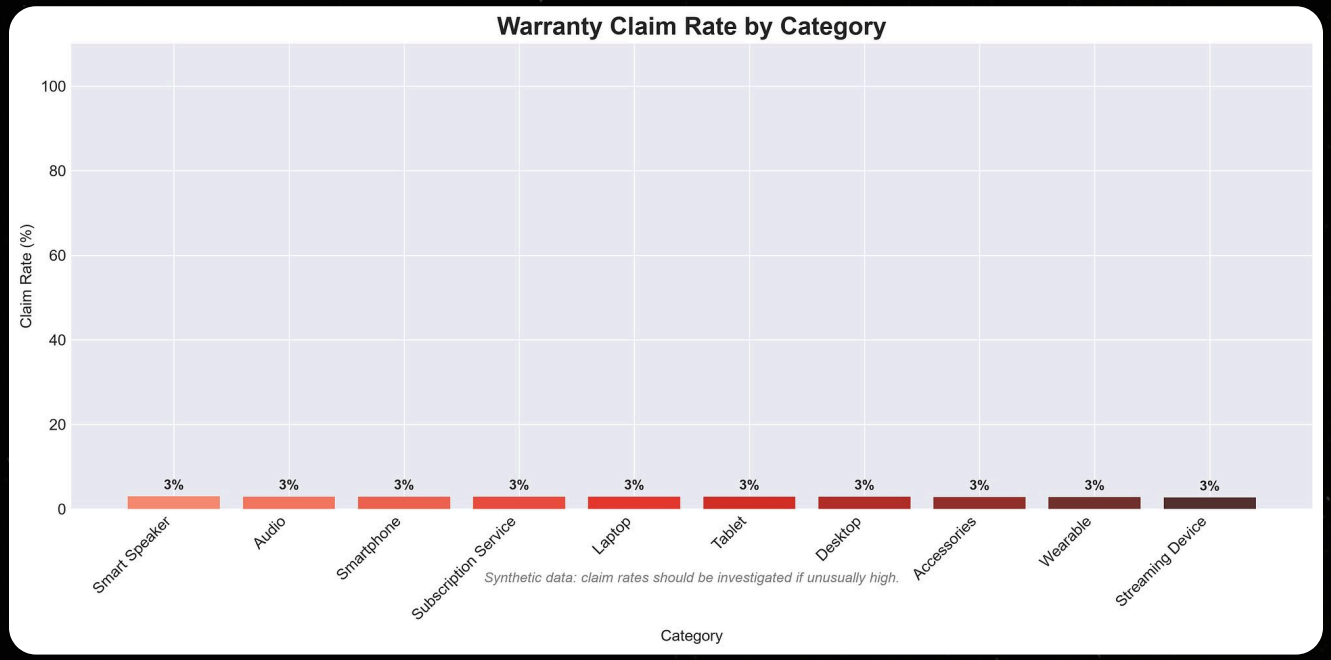

The leading stores generate very similar revenue levels, suggesting that performance is distributed across multiple locations rather than dominated by a single store.

- **Apple Dubai Mall:** ~$84.5M — top-performing location
- **Apple Southland:** ~$83.8M
- **Apple Kyoto:** ~$83.7M
- **Apple Covent Garden:** ~$83.7M
- **Apple Fukuoka:** ~$83.6M

The range between the top five stores is less than **$1M** — indicating a balanced, geographically diverse retail footprint.

Warranty Claims Are Consistent Across Categories

Key Takeaway

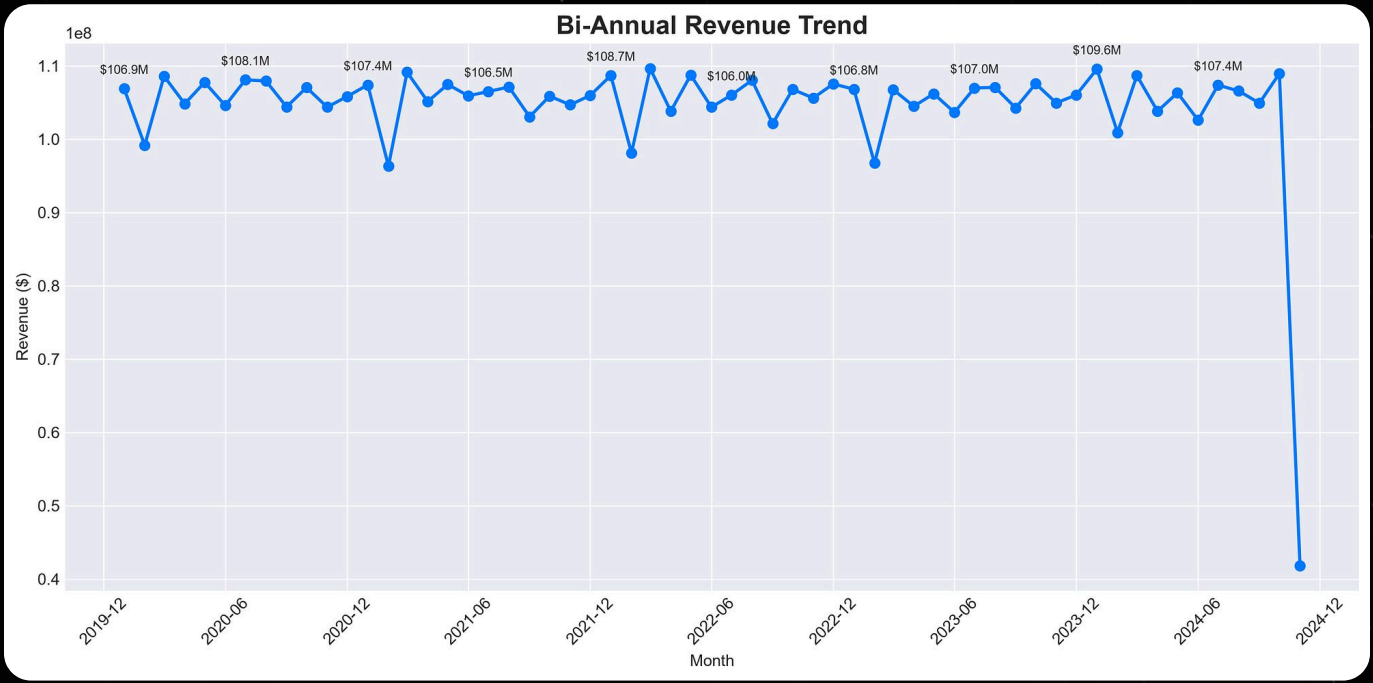

Warranty claims affect roughly **3% of sales**, with only small differences between categories.

- Overall claim rate: approximately **2.9%**
- Highest observed category (CAT-9): **~2.95%**
- Range across all categories: less than **0.05 percentage points**

The narrow range suggests that warranty claims are not concentrated in any single category based on this dataset.

Growth Is Volatile Month to Month, Not Structurally Declining

Bi-Annual Revenue Trend (2019-2024)

Key Takeaway:

Revenue remained strong and stable from 2020-2023, averaging $107M bi-annually, with a notable decline in late 2024.

- 2020-2023: Consistent $106-108M per 6-month period
- Late 2024: Dip to $41M (requires investigation)

What Should Sallie Stores Do Next?

1

Protect High-Performing Categories

Monitor tablet, accessory, and top product segments closely — they contribute substantial revenue.

2

Track Revenue Volatility Monthly

Use monthly revenue and growth tracking to flag unusual changes early rather than reacting after several months.

3

Monitor Warranty Claims Alongside Sales

Maintain category-level claim monitoring to detect whether any product or category develops materially higher rates over time.

4

Build a Repeatable Reporting Layer

Use the cleaned pipeline and PostgreSQL analytics layer as the foundation for dashboards, forecasting, and executive reporting.

THANK YOU
